# TEMPO/GeoXO for Georgia EPD's Air Quality Management

**Byeong-Uk Kim, Xiangyu Jiang, and Asher Mouat**  
**Data and Modeling Unit**  
**Planning and Support Program**  
**Georgia EPD - Air Protection Branch**

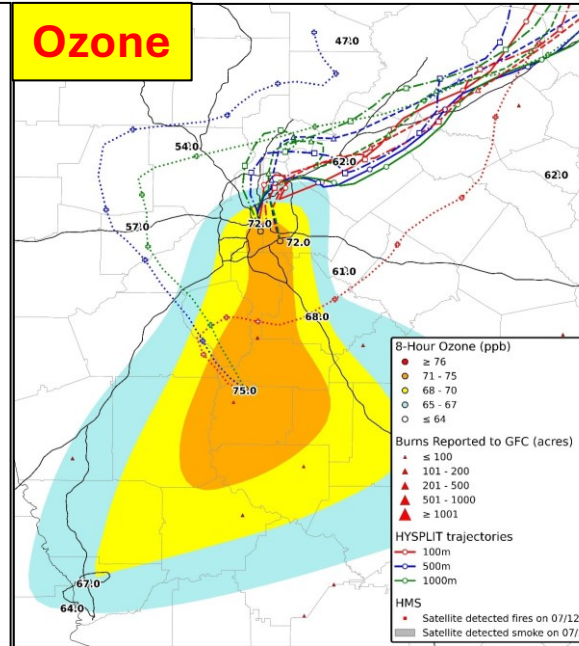

**TEMPO/GeoXO ACX Joint Science Team Workshop**  
**August 21, 2025**

# Regulatory Requirements and Georgia EPD's Mission

- National Ambient Air Quality Standards (NAAQS) and Regional Haze Rule (RHR)
- State Implementation Plans (SIPs)
  - Plans to comply with NAAQS and RHR
- Georgia EPD's Mission
  - These regulatory requirements are necessary to protect public health and ecosystem.
  - Consequently, meeting these requirements following the Clean Air Act is the most critical mission for Georgia EPD.
    - **An Exceptional Event Demonstration is a regulatory tool for air agencies to remove “uncontrollable” events to show compliance with the NAAQS.**

## Ozone

## Regional Haze

“Natural” visibility conditions by 2064

## PM<sub>2.5</sub>

# National Ambient Air Quality Standard (NAAQS)

- National Ambient Air Quality Standards
  - Primary (Health Based)
  - Secondary (Welfare Based)
- Four Basic Elements of all NAAQS (e.g., O<sub>3</sub>)
  - Indicator (e.g., O<sub>3</sub> for photochemical oxidants)
  - Averaging time (e.g., 8-hour average)
  - Form (e.g., annual 4<sup>th</sup> highest daily maximum averaged over 3 years)
  - Level (e.g., 70 ppb)
- Design Value (DV)
  - Calculated “level” of an indicator with measured concentrations (FRM/FEM only)
  - To be compared with the corresponding NAAQS level
  - Following the averaging time and form of the corresponding NAAQS
  - **DV is the ultimate index to determine future compliance with NAAQS.**

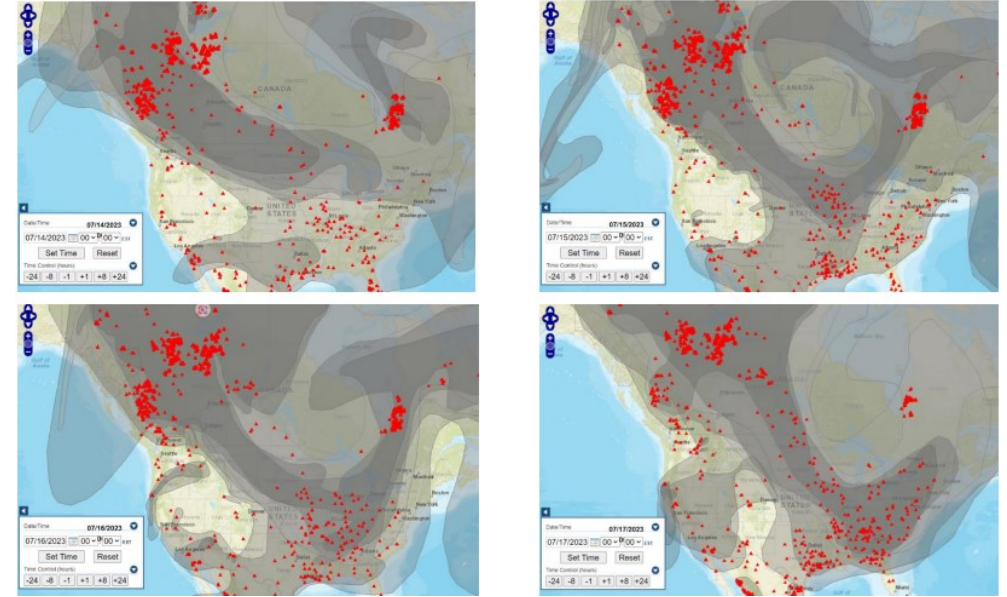

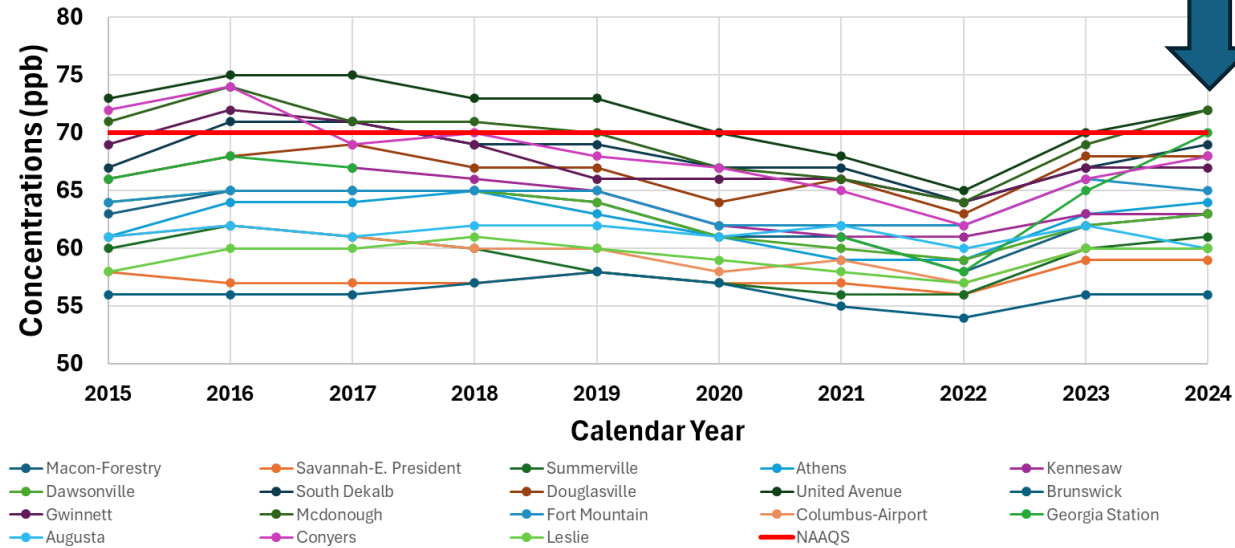

Pollutant [links to historical tables of NAAQS reviews]		Primary/ Secondary	Averaging Time	Level	Form
<a href="#">Carbon Monoxide (CO)</a>		primary	8 hours	9 ppm	Not to be exceeded more than once per year
			1 hour	35 ppm	
<a href="#">Lead (Pb)</a>		primary and secondary	Rolling 3 month average	0.15 µg/m <sup>3</sup> <sup>(1)</sup>	maximum arithmetic mean of 3 consecutive monthly means in a 3-year period
<a href="#">Nitrogen Dioxide (NO<sub>2</sub>)</a>		primary	1 hour	100 ppb	Annual 98th percentile of 1-hour daily maximum concentrations, averaged over 3 years
		primary and secondary	1 year	53 ppb <sup>(2)</sup>	Annual Mean
<a href="#">Ozone (O<sub>3</sub>)</a>		primary and secondary	8 hours	0.070 ppm <sup>(3)</sup>	Annual fourth-highest daily maximum 8-hour concentration, averaged over 3 years
<a href="#">Particle Pollution (PM)</a>	PM <sub>2.5</sub>	primary	1 year	9.0 µg/m <sup>3</sup>	annual mean, averaged over 3 years
		secondary	1 year	15.0 µg/m <sup>3</sup>	annual mean, averaged over 3 years
		primary and secondary	24 hours	35 µg/m <sup>3</sup>	98th percentile, averaged over 3 years
	PM <sub>10</sub>	primary and secondary	24 hours	150 µg/m <sup>3</sup>	Not to be exceeded more than once per year on average over 3 years
<a href="#">Sulfur Dioxide (SO<sub>2</sub>)</a>		primary	1 hour	75 ppb <sup>(4)</sup>	Annual 99th percentile of 1-hour daily maximum concentrations, averaged over 3 years
		secondary	1 year	10 ppb	annual mean, averaged over 3 years

**Satellite products that can be used to provide DVs with/without exceptional events will be helpful.**

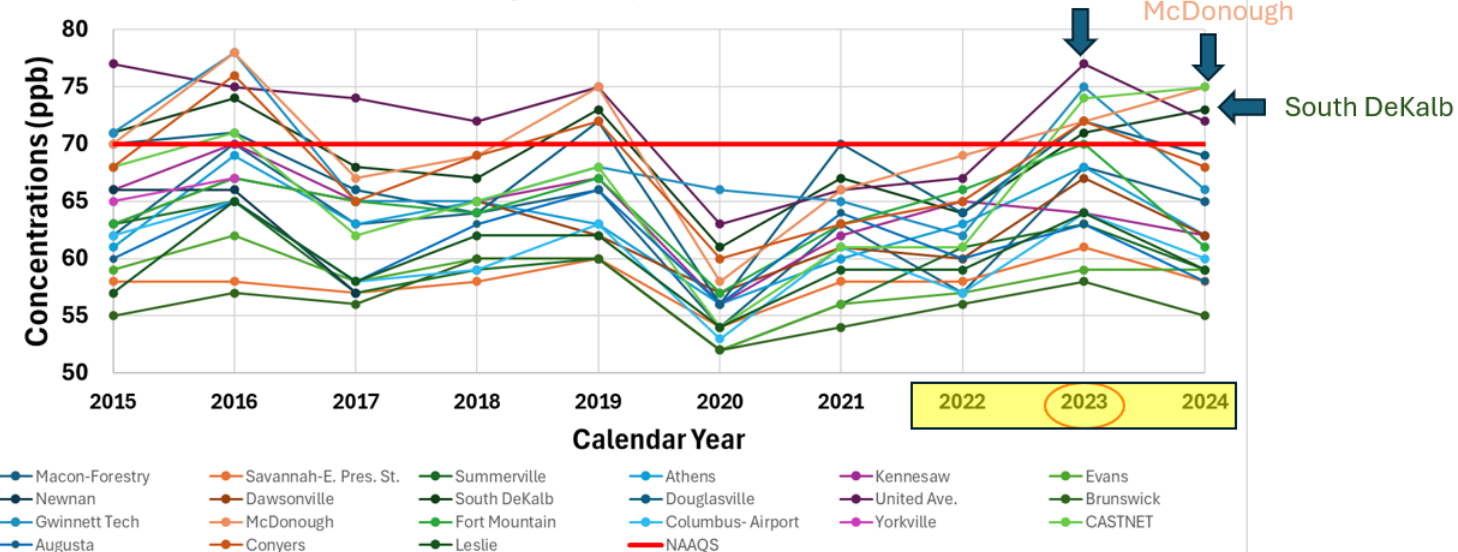

# Ozone Air Quality Trends in Georgia

8-hour Ozone DV (before Exception Event Demonstration)

Annual 4<sup>th</sup> Highest Daily Max 8-hour Ozone

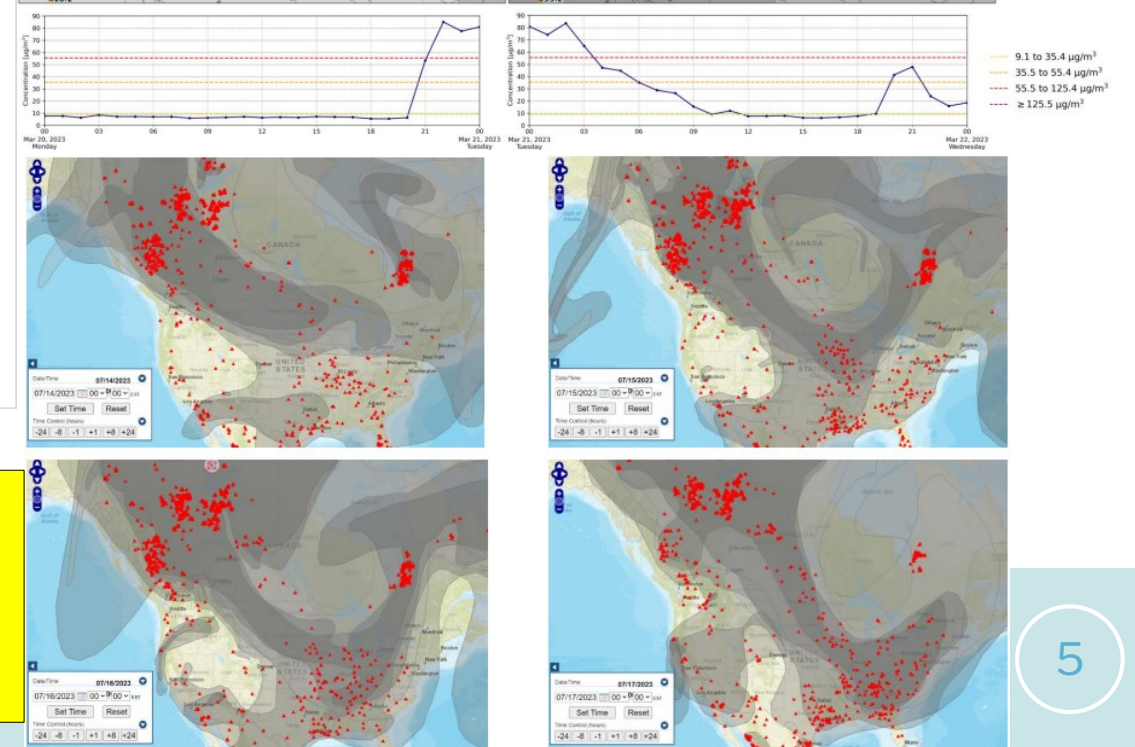

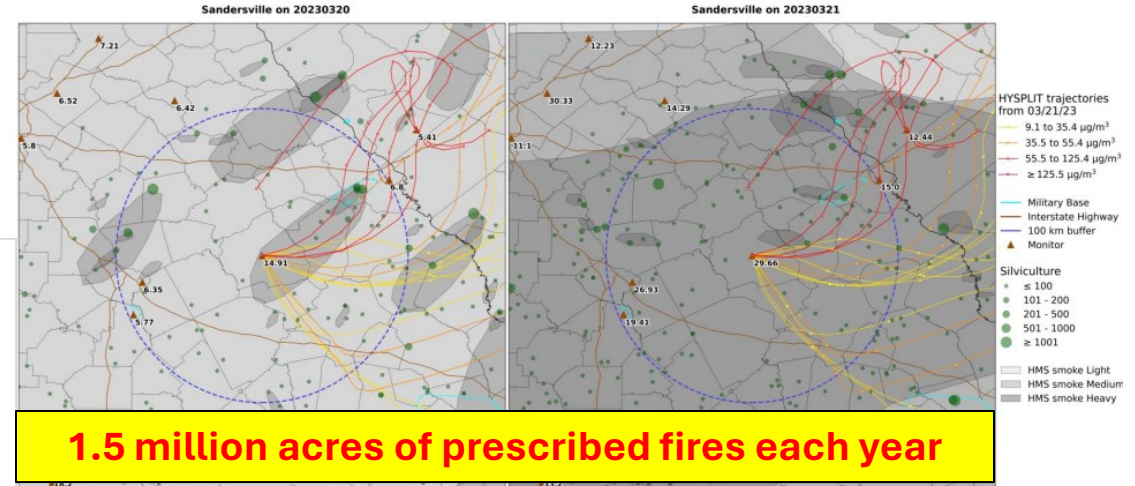

**For 2023, many ozone sites including the Metro Atlanta area ozone sites seemed to have been influenced by Canadian Wildfires.**

**Therefore, Georgia EPD plans to develop and submit Exceptional Event Demonstrations for ozone.**

# PM<sub>2.5</sub> Air Quality Trends in Georgia

Annual PM<sub>2.5</sub> DV (before Exception Event Demonstration)

# Use of TEMPO Data in Georgia EPD: Exceedance Reports

GOES19 via RAMMB-SLIDER

TEMPO via ArcGIS

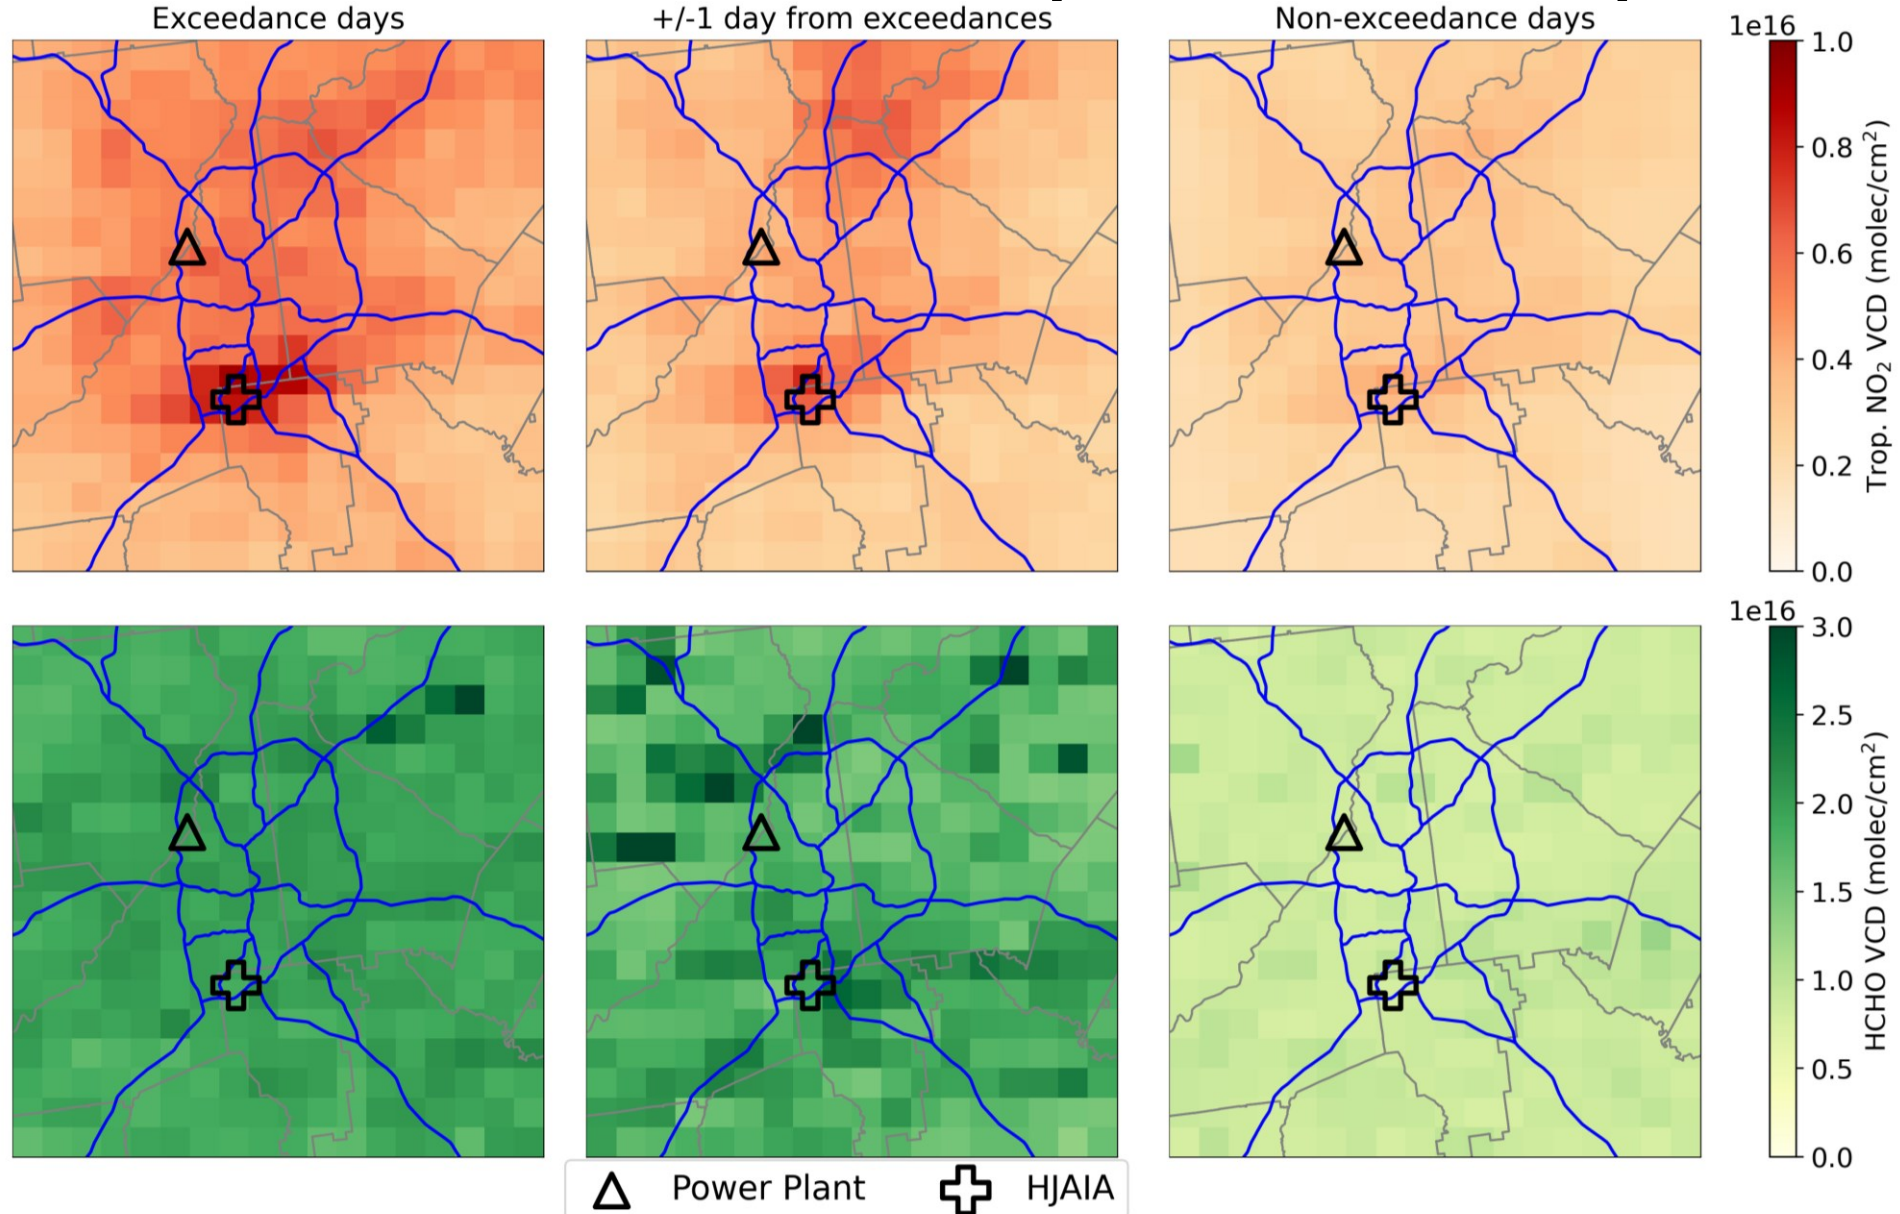

TEMPO via ArcGIS

# NO<sub>2</sub> and HCHO VCDs: Exceedance vs non-Exceedance

## March-October 2024 (9 AM-7 PM EST)

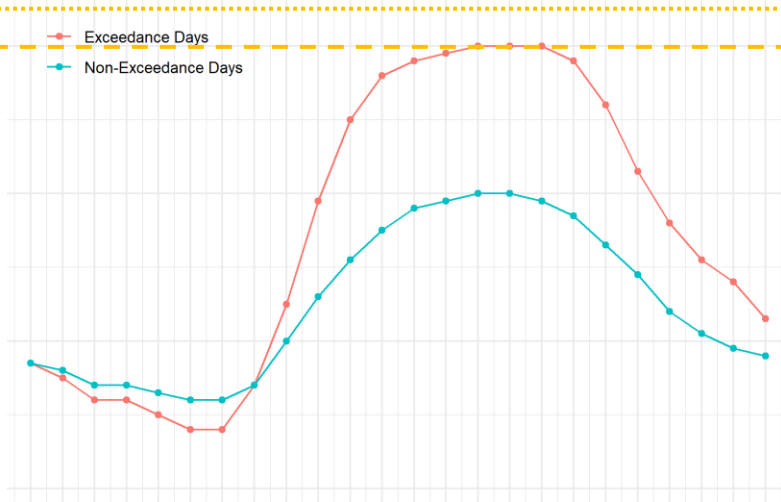

# Diurnal $O_3$ and $NO_x$ : Exceedance vs Non-exceedance

## March-October during pre-COVID, COVID, and post-COVID

Hourly  $O_3$  for Exceedance vs. Non-Exceedance Days over 2015-2019

Hourly  $O_3$  for Exceedance vs. Non-Exceedance Days over 2020-2022

Hourly  $O_3$  for Exceedance vs. Non-Exceedance Days over 2023-2024

Hourly  $NO_x$  for Exceedance vs. Non-Exceedance Days over 2015-2019

Hourly  $NO_x$  for Exceedance vs. Non-Exceedance Days over 2020-2022

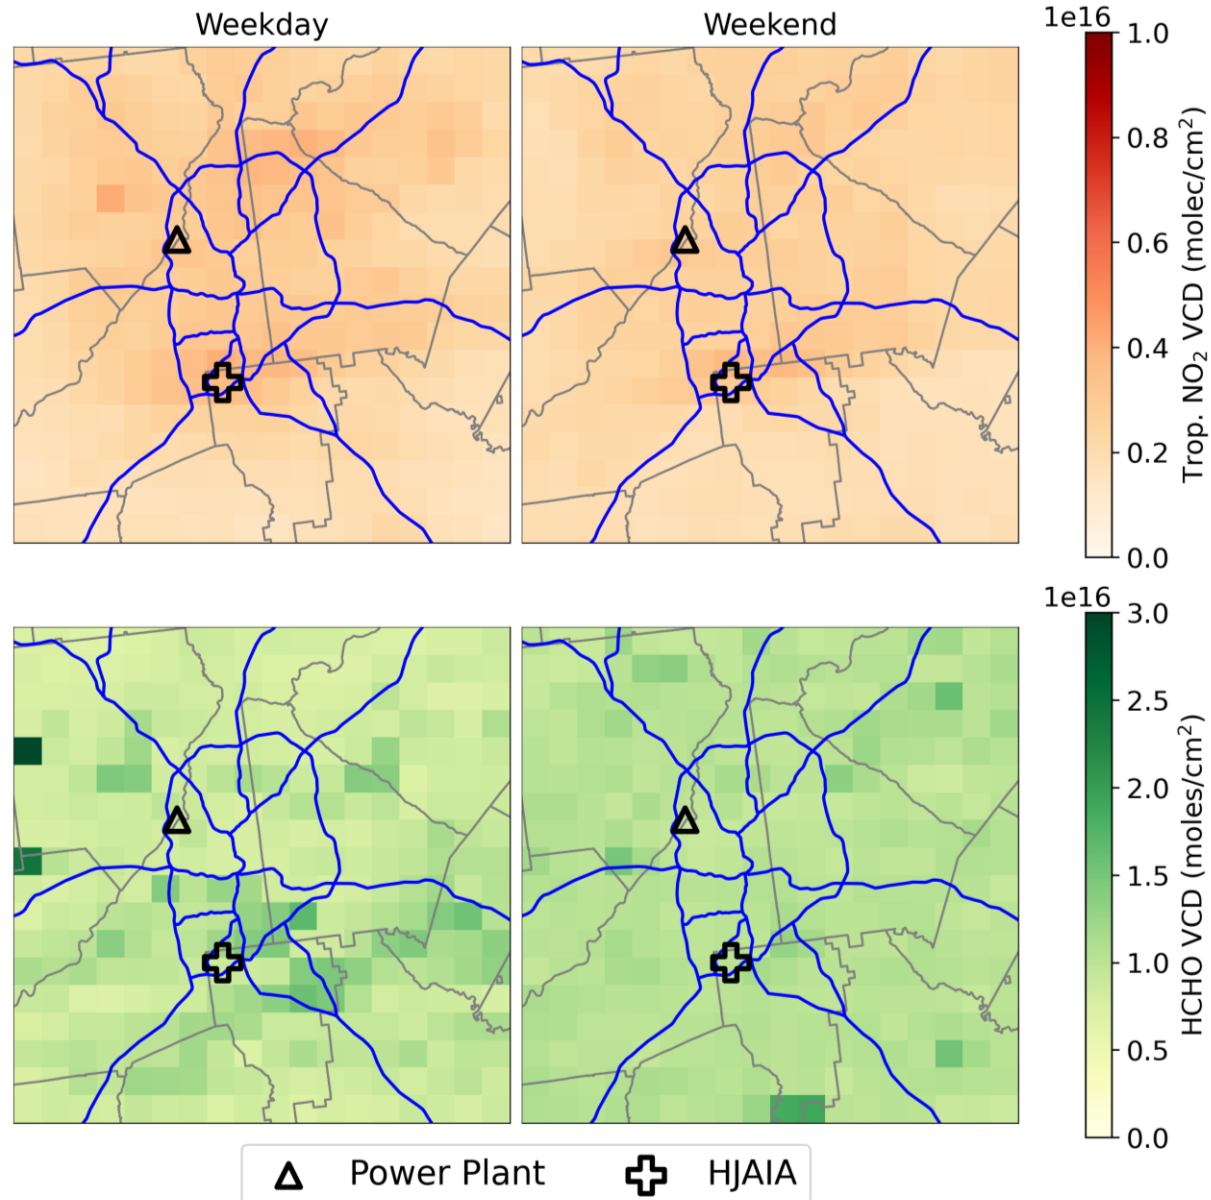

Hourly  $NO_x$  for Weekdays vs. Weekend over 2023-2024

# NO<sub>2</sub> and HCHO VCDs: Weekdays vs Weekends March-October 2024 (9 AM-7 PM EST)

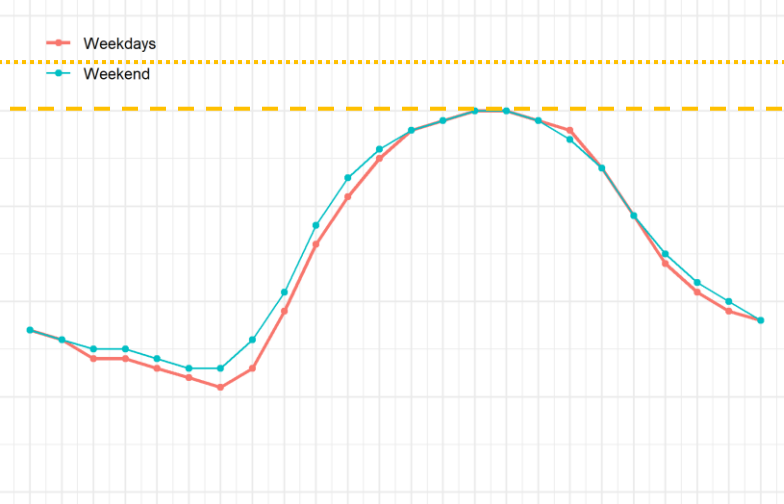

# Diurnal O<sub>3</sub> and NO<sub>x</sub>: Weekdays vs Weekends

## March-October during pre-COVID, COVID, and post-COVID

Hourly O<sub>3</sub> for Weekdays vs. Weekend over 2015-2019

Hourly O<sub>3</sub> for Weekdays vs. Weekend over 2020-2022

Hourly O<sub>3</sub> for Weekdays vs. Weekend over 2023-2024

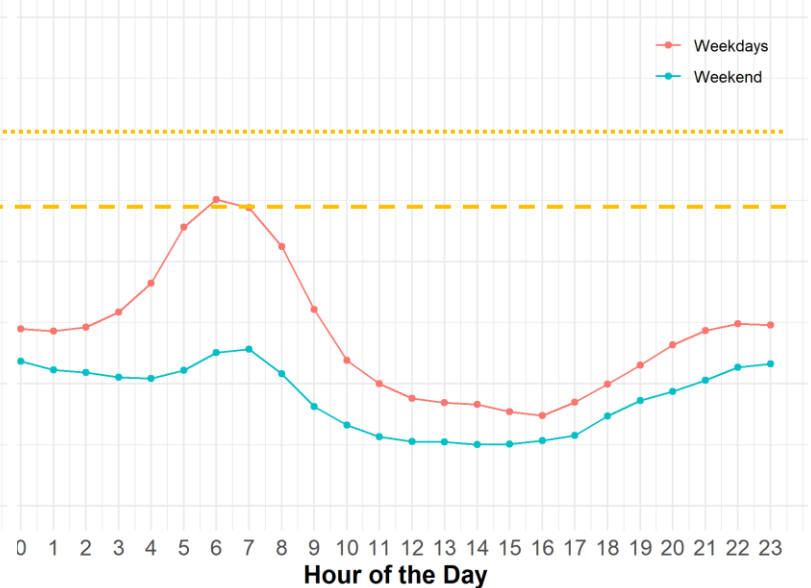

Hourly NO<sub>x</sub> for Weekdays vs. Weekend over 2015-2019

Hourly NO<sub>x</sub> for Weekdays vs. Weekend over 2020-2022

Hourly NO<sub>x</sub> for Weekdays vs. Weekend over 2023-2024

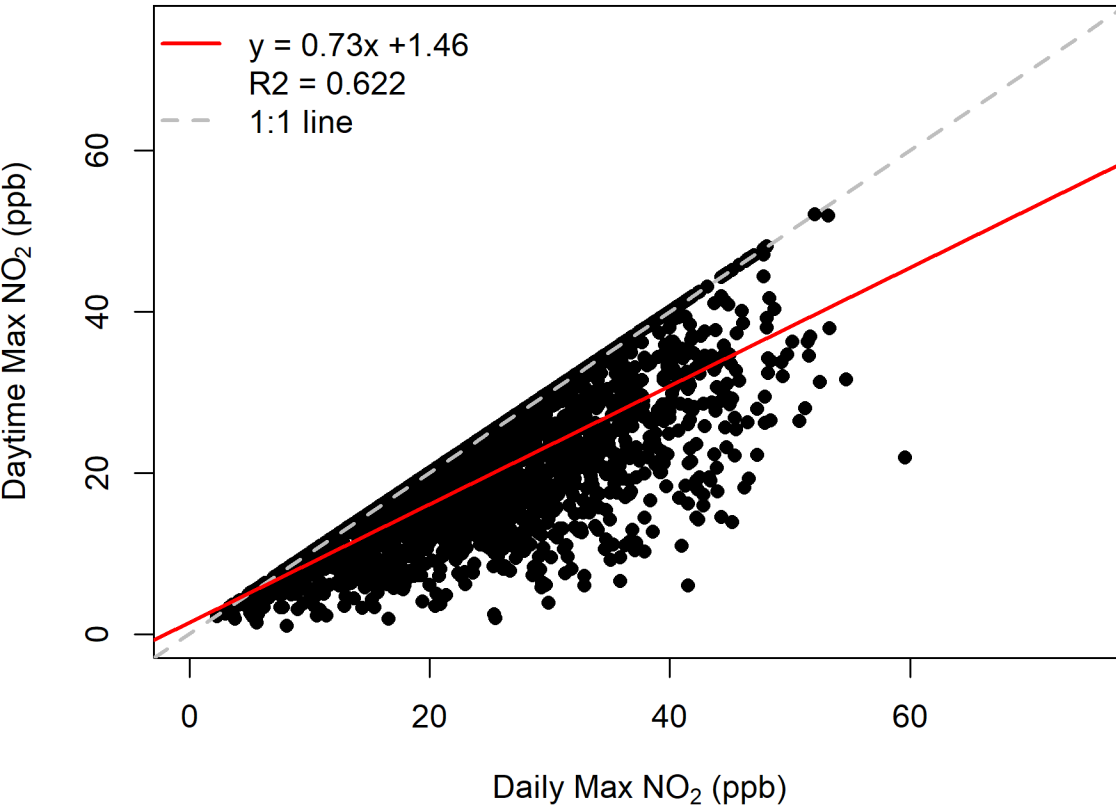

# Need for Ground Level NO<sub>2</sub> Data in Rural Area

## All Active Urban NO<sub>2</sub> Sites

Daily vs. Daytime Max hourly NO<sub>2</sub> at All NO<sub>2</sub> sites over 2023-2024

## Discontinued Rural NO<sub>2</sub> Site

Daily vs. Daytime Max hourly NO<sub>2</sub> at site 132470001 over 2015

**Can max daytime 1-hour NO<sub>2</sub> be a good proxy for max daily 1-hour NO<sub>2</sub>? Max daily 1-hour NO<sub>2</sub> is needed for “background concentrations” during NAAQS analysis in PSD permit modeling.**

# Nitrate vs. NO<sub>x</sub> Emissions

Georgia Annual NO<sub>x</sub> Emissions vs.  
Nitrate Visibility Impairment on 20% Most Impaired Days

**IMPROVE Steering Committee is in the process of cutting operating costs for the network in the coming months.**

# Summary

- Satellite products providing DVs with/without exceptional events will be helpful for air agencies to comply with NAAQS and to focus on “controllable” emissions.
- Georgia EPD uses TEMPO data for various air quality analysis:
  - Investigating causal-relationships between PM<sub>2.5</sub> exceedances and fires (both prescribed fires and wildfires)
  - Understanding cause of high ozone events
    - Ozone formation regime (i.e., NO<sub>x</sub> vs VOC): Post-COVID
      - Differences between exceedance days and non-exceedance days
      - Differences between weekdays and weekends
    - Impacts of wildfires
  - Examining potential use of satellite derived products for regional haze (AOD vs visibility), source-oriented monitoring, and permit modeling purposes
    - Need for Rural NO<sub>2</sub> Monitoring
